How an Industry Enterprise Implements an International Agile Project in the Cloud

"The agile project approach has clearly added greater dynamic to the project. Fabasoft Folio Cloud is the ideal solution for the safe and reliable collaboration of our project team located in the USA, Germany and Austria."

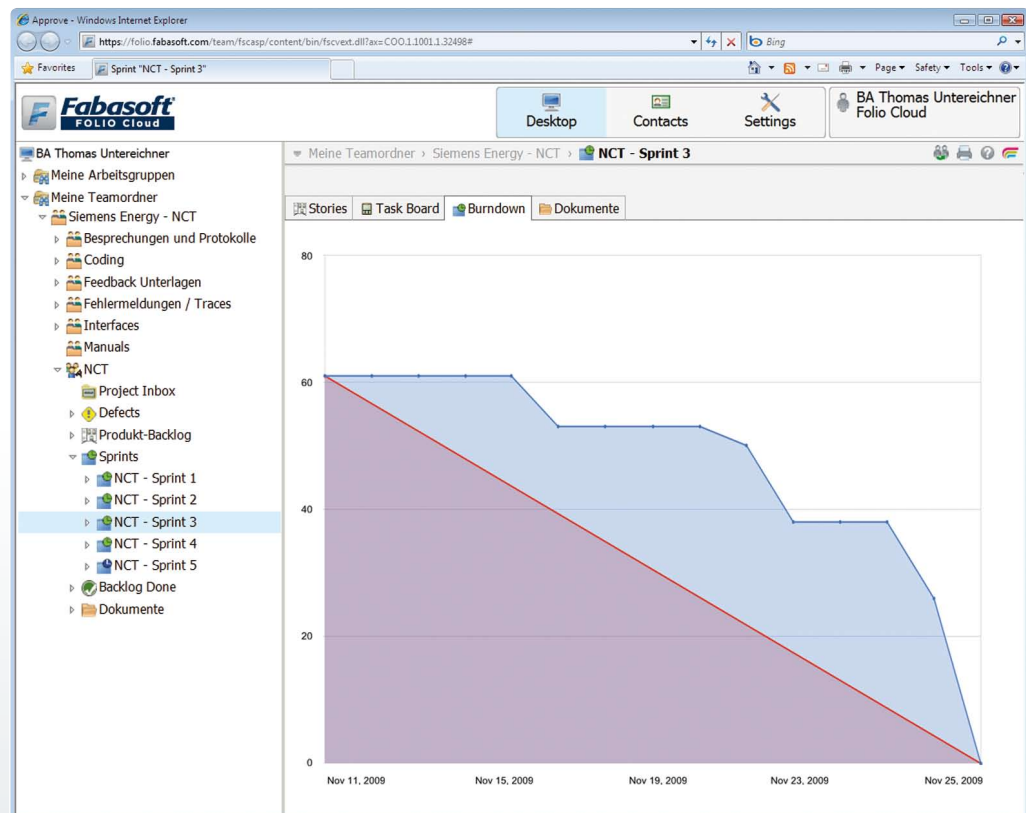

Daniel Morell
Siemens Energy
Project Leader

The Siemens AG Energy Sector is currently implementing a software solution with an international project team. This poses two major challenges:

1. The correct implementation of a comprehensive, complex catalog of requirements
2. Strict coordination of a project team spread out in various international locations (USA, Germany, Austria).

Siemens Energy coordinates this project with the agile "Scrum" project management method (see www.scrumalliance.org) via Fabasoft Folio Cloud. In short, clearly defined time spans ("sprints"), "Scrum" makes sure that specific requirements, prioritized by business value, are specified, implemented, tested and released. This creates concrete and utilizable project results at an early stage. Requirements can quickly be adjusted, supplemented and re-prioritized. Fabasoft Folio Cloud is the tool of choice for the coordination of the international project team. Each and every project team member has access to up to date and consistent project documentation, safely and reliably managed by Fabasoft Folio Cloud, at any time, anywhere and via any web browser.
