How a University Institute Drives Agile Research Projects with Industry Partners in the Cloud

Prof. Dr. Miesenberger's institute is conducting a research project via Fabasoft Folio Cloud in cooperation with the Fabasoft group to optimize Fabasoft software for use by people with special needs.

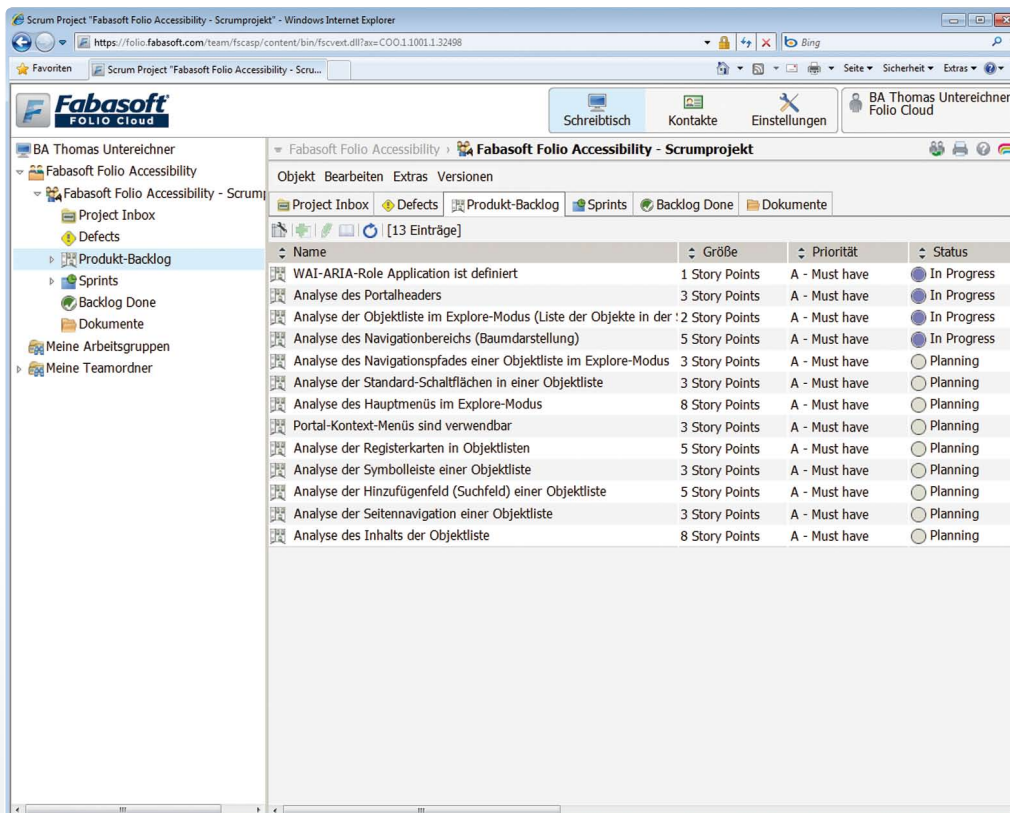

The research project is conducted as an agile project using the "Scrum" project management method. The project tasks (user stories) are organized and prioritized in a backlog by the "Product Owner". People from various Fabasoft divisions are involved in the research project.

After the end of each sprint, the concrete results from the research project are presented in the shape of optimized Fabasoft software.

"Thanks to Fabasoft Folio Cloud it is possible to conduct safe research project team work via the Internet for the first time: at any time, anywhere and via any web browser. The research documentation is saved reliably in Fabasoft Folio Cloud and may only be accessed by invited and authenticated users. Research projects can be efficiently managed by the agile 'Scrum' project management method, which supports interdisciplinary cooperation and adds greater dynamic to the research."

*Prof. Dr. Klaus Miesenberger
Johannes Kepler University, Linz
Dep. Head of Institute*
